SUMMARY

An Energetic and Experienced Developer with a successful track record in software development, mastering Laravel, Next.js, and Vue.js to change the way of online transactions. Proficient in creating interactive, user-focused web applications, and has exceptional problem-solving abilities and a passion for continuous learning. Expert in API and microservices development, significantly improving user experience and operational efficiency. In addition, experienced as a freelancer, providing innovative solutions that suit client needs.

EXPERIENCE

Freelance Full-Stack Developer

Project: Attendance System for MIT, Ciamis

- Developing a comprehensive attendance management system to facilitate employee attendance recording using Laravel.
- Uses a transactions database to ensure data accuracy and consistency in each attendance update, preventing data loss that could impact reports.

Project: NickTopUp

- Designed and developed a user-friendly online top-up platform using Laravel, allowing users to top up various services ranging from games to electricity token.
- Integrate payment gateways and maintain security in every transaction by implementing database transactions to ensure data integrity. This step prevents data loss or errors during the payment process
- Designing a scalable application architecture using Laravel, allows the platform to handle an increasing number of users and transactions without sacrificing performance.

PROJECTS

- **Course Academy**
  - Web applications designed to facilitate online learning for diverse audiences, including students, professionals, and lifelong learners. This platform provides easy access to various interesting courses and educational resources.
  - Leverage Next.js, TypeScript, and Supabase to build scalable and efficient applications, improving performance and security.integrate Stripe Payment gateway for transaction

- **HasilBumi**
  - Web application that facilitates the sale of raw goods to consumers and sellers. Built using Laravel and Vue.js framework, the platform provides a seamless experience for users to browse, buy, and sell raw products.
  - Payment Gateway Integration: Uses Stripe to facilitate secure and easy transactions for users.
  - Chat System Between Users: Chat feature that allows users to communicate directly, facilitating negotiations and questions about products.
